

Web Development Assessment 2: Project

Create a website for a **Virtual Pet Adoption Service**.

The virtual pets can be based on real or imaginary animals or birds.

The website should consist of:

- **Homepage**
 - Welcome visitor and introduce visitor to the website
 - Include an embedded video from YouTube or Vimeo
- **An Adopt A Pet page**
 - List the virtual pets available for adoption - **(use a table)**
 - There should be at least 4 pets listed
 - Each pet should be identified as a type of animal/bird, a description/list of characteristics, and an image
 - Information on how to care for adopted pets
 - Links to related websites
- **A page containing a form – to include:**
 - Person's Name – **required**
 - Email address – **required**
 - Date of birth - **required**
 - Is this their first time adopting a virtual pet – use Radio buttons for yes/no
 - Pet they want to adopt – use drop down list with at least 4 types of pets listed – *these should be the same pets as listed in the resources page.*
 - Have a multi-line text entry for the visitor to explain how they will provide a good home for the virtual pet.
 - Ask the visitor if they are interested in any or all of the following, e.g. online social communities, multiplayer challenges, create a storyline for a virtual pet, or creating a new virtual pet – use checkboxes.
 - Provide a file upload option for anyone who wants to upload a storyline for a virtual pet, or a picture of their virtual pet (photo or hand-drawn)
 - Submit and Cancel buttons
 - Use <https://webdevcit.com/displayvalues.php> to verify that your form sends the data from the form to the server – **very important!**
- **Contact Us Page**
 - Address, phone number and email to some imagined office (or you can use MTU Bishopstown Campus address)
 - Map – embedded from Google Maps – (create the address, or use MTU Bishopstown Campus address again)
- **About Us Page**
 - Information about the website.
 - List of Frequently Asked Questions.

Form
details

Requirements

1. All content must be marked up using HTML5.
2. All text must be your own.
3. All the styling should be in **ONE** external CSS file¹. All your HTML pages must be linked to this **CSS** file. **No inline or embedded styling permitted.**
4. Addressing to resources (CSS file, images and other web pages) must use relative addressing².
5. Use CSS for the layout of the site. Tables may not be used for layout but may be used for suitable content.
6. Consider using a suitable colour palette for a young audience.
7. Pages must be **HTML5** and **CSS3 compliant**. Validate your pages and CSS files with <http://validator.w3.org> and <https://jigsaw.w3.org/css-validator>
8. **You must have at least 1 page with a three column CSS layout.** Instead of three columns of text, consider using images in your three column layout e.g.

Figure 1 Three column layout as part of lego.com's homepage (equal distribution)

Figure 2 Two rows of three columns used for navigation with even distribution

9. There should be **persistent navigation** on each page. Every page should be accessible from every other page. **Navigation should be a horizontal navigation bar.**
10. Every page should contain a "**housekeeping**" section e.g. contains copyright information and contact details for the website's developers.

¹ Heavy penalties will be applied for presentational markup e.g. `<h1><b>Heading</b></h1>`, in which the `<b>` is being used to style the heading but CSS should have been used.

² **No absolute addressing allowed**, e.g. `h:/r000012345/webdev/project/images/cow.png` is not allowed.

11. You should demonstrate use of **contextual selectors** and **pseudo-classes**.
12. Consider **responsiveness** in your website, making it work on different screens and screen resolutions.
13. Try to include images that you have taken yourself, (*maybe toys on shelves in Smyths*). Any images that you use from other websites must be referenced properly. The referencing can be included in the code as a comment beside the image code. Please note that using google.com as the source of the image is **NOT** sufficient. The exact web page URL for the image must be included in the comments. 
14. If you are looking for icons, please refer to reliable websites such as <http://iconspedia.com> paying particular attention to the licenses. For example, if the license requires attribution for the icon, then please include it in your website. Do not use Google's Image Search to search for icons because you cannot be sure of the associated licenses.
15. Consider **accessibility** especially when creating the website paying particular attention to forms (connect labels to form elements OR use aria-label attribute, and other ARIA attributes). Validate the webpages using the validation tool at <http://wave.webaim.org/>.

Project due @ 23:59 Monday 27th November 2023

Create a zip file of the folder containing your HTML pages, CSS file, and all images required for your website, and upload it through Canvas.

Please note that the website should be your own work.

- You are required to make a Statement that the project is all your own work. This should be included as a comment in your home page HTML code file.
- Any material taken from another source must be referenced either in the content or as a comment in the HTML or CSS code.

Plagiarism is considered cheating on the test and can result in penalties up to and including receiving a mark of zero for the project.
